

FLASHBURN V4.6

RELEASE NOTES
VERSION 4.6

Version 4.6

- Added support for Code Composer Studio v4 through v6
- Flash viewer improvements
- Longer timeout for very large flash erase and program operations

Version 4.5

- Added support for Code Composer Studio v4.2 through v5.5.
- Added support for TI ASCII format .hex files.
- The Porting Kit version now supports direct connection to EVM boards and emulators without Code Composer Studio installed. Code Composer is required for creating the custom FBTC programs and building the .ccxml target configuration.
- Added examples for the C5000 EVM boards USB5515 (parallel flash) and USB5535 (SPI flash)

Version 4.0.4

- Additional diagnostics support has been added to aid in solving issues related to connected to Code Composer Studio if they occur.

Version 4.0.3

- The licensing key generation has changed to better support computers with multiple MAC addresses.

Version 4.0.1

- Added support for DSK6713, both 8 bit and 16 bit flash configurations

Version 4.0.0.435

- Corrected the layout of the FlashBurn GUI and About box when running on high DPI displays
- Corrected the 32x32 icon
- Added release notes to the installation
- Added an uninstall shortcut to the Start menu

Version 4.0.0.428

- Corrected the URL for loading local banner ads when FlashBurn is not able to reach www.softwaredesignsolutions.com

Version 4.0.0.427

- First product release.
